

## COMPANY PROFILE

Founded in the 1970's in New York, USA, Penetron International Ltd. has been focusing on concrete protection and waterproofing systems building its reputation on its core crystalline technology. Today the company is the leading manufacturer of innovative crystalline waterproofing and durability products with an established presence in over 65 countries worldwide.

Penetron Australia is an independent and wholly Australian owned private company. Penetron Australia provide their clients with customized, technical and commercial support to ensure a quality-controlled application of Penetron products that meet the demands of their projects. As a result Penetron products have been used on a large range of projects across challenging applications in infrastructure and private sector projects including hydroelectric power plants, sewage treatment plants, tunnels, bridges, marine environments, water retaining structures, residential and commercial basements.

The ability of Penetron products to efficiently protect concrete structures and to enhance the durability of treated concrete has been acknowledged by a multitude of renowned test laboratories as well as major engineering and architectural departments, contractors and ready-mix companies.

Its proven performance, ease and versatility of application have made Penetron a preferred choice and trusted brand for waterproofing and concrete protection in the global building community.
